Achieving Digital Transformation Success After an Acquisition

Streamlining Record Management with
Access Unify™ | Active File Service

The Challenge

In recent years, the company has experienced significant growth by acquiring high-quality, natural gas assets with low operating costs, low decline production, and significant upside potential. This rapid growth and integration of companies has created large volumes of paper-based records that need to be managed and shared across various departments. This, and a more dispersed workforce, led them to seek a solution to their accessibility and collaboration challenges, as paper documents are difficult to search and share, and they take up significant physical space.

The Solution

To address these challenges, the company began exploring scanning solutions that would allow them to store and manage their records digitally. They considered various options, including a “scan-all” solution and traditional document management systems. However, none of the options met all

of their needs, which included a cloud-based solution that allowed easy access to files and made information shareable across the organization.

After extensive research and consultation with various vendors, the company chose Access Unify | Active File Service. With Active File Service, paper records are stored securely offsite, and digital scans are created and delivered as they are needed, in four hours or less. This enabled significant cost savings while making it easy to search for and access records from anywhere.

Conclusion

The implementation of Access Unify | Active File Service has been a success, helping the company to overcome its challenges around creating a digital-first program and collaboration across their organization. The solution also helped improve efficiency and productivity, maintained security, and established a truly integrated solution.

Access has a very customer-focused approach to implementation.”
